

DRAIN OUTLETS & CORNERS PRE-FORMED IN BITUMEN

Drain Outlets

Corners

Cant bit

Description

The pre-formed polymer bitumen drain outlets are manufactured to be reliable and economical but above all 100% compatible with the torch-on membranes.

Advantages

These products are 100% compatible with the polymer bitumen waterproofing membrane and therefore do not require complicated application procedures. They are adaptable, easy to torch in different situations which arise on roofs, like corners, horizontal drains, etc.

They are easy and economical to apply and simply require the same tools as those used for the polymer bitumen membranes, well known by all applicators.

They are also easy to repair as they are made of polymer bitumen membrane reinforced with polyester.

Fully compatible with the torch-on membranes, they become one with the waterproofing system.

These exclusive accessory items from TECA are covered by European patent.

Technical data

	d [mm]	h [mm]	Pcs x Box
Drain Outlet 60	60	230	12
Drain Outlet 80	80	230	12
Drain Outlet 100	100	270	12
Drain Outlet 120	120	230	12
Drain Outlet 140	140	230	12
Horizontal Drain Outlet 100	100	250/270	12

	Dimensions [mm]	Pcs x Box
Internal corner	150 x 150 x 150	20
External corner	340 x 340 / 170 x 170	20

	Dimensions [mm]	Pcs x Box
Angle fillet Cant Bit film PE finish	50 x 40 x 65 x 1100	30

BOCCHETTONI ED ANGOLI BITUMINOSI PREFORMATI BITUMINOUS PRE-FORMED DRAIN OUTLETS & CORNERS

METODO DI APPLICAZIONE METHOD OF APPLICATION

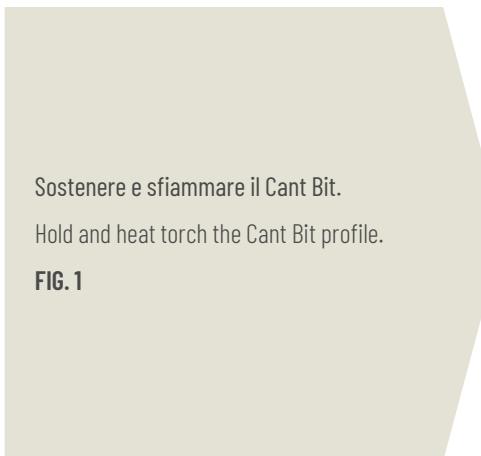

FIG. 1

FIG. 2

FIG. 3-4-5

Preparare un pezzo di membrana della misura 50 x 50 cm. (almeno 8/10 cm. più larga della flangia del bocchettone). Ritagliare con cutter il foro per lo scarico.

Prepare a piece of membrane measuring 50 x 50 cm. (at least 8/10 cm wider than the flange of the drain outlet). Cut the drain hole with a cutter.

FIG. 6-7

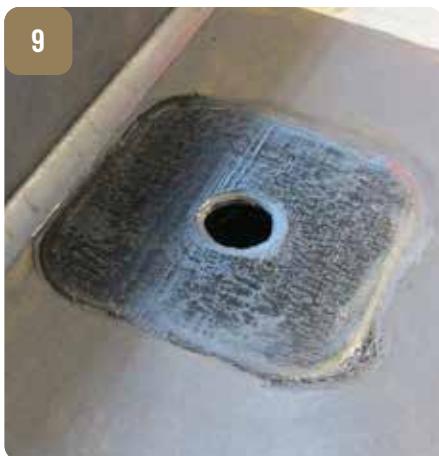

Appicare il pezzo di membrana sopra la superficie con foro di scarico, sfiammando la parte inferiore e far fuoriuscire un cordolo di mescola fusa dal perimetro della membrana.

Apply by heat torch the piece of membrane over the surface with the drain hole, torch the lower part until the compound forms a liquid mass from the perimeter of the membrane.

FIG. 8-9

Sfiammare la faccia superiore del pezzo di membrana e riscaldare anche la flangia inferiore del bocchettone.

Heat torch the upper face of the membrane piece and the lower flange of the drain outlet.

FIG. 10-11

Inserire il bocchettone nel foro di scarico e completare la posa a fiamma.

Insert the drain outlet in the hole and complete the application with torch.

FIG. 12-13

Posizionare a secco la porzione di membrana bituminosa da utilizzare avendo cura di sovrapporla al Cant Bit per circa 7/8 cm.

Place the bituminous membrane to be used, making sure to overlap it on the Cant Bit for about 7/8 cm.

FIG. 14

Riavvolgere la porzione di membrana per metà della sua larghezza ed iniziare la posa con bruciatore a caldo. Aiutandosi con un cazzuolino completare la posa a fiamma sul Cant Bit. Saldare la parte rimanente a fiamma.

Rewind the membrane portion to half its width and start applying with a torch. Use a trowel to complete the installation on the Cant Bit. Weld the remaining part by torch.

FIG. 15-16-17-18

BOCCHETTONI ED ANGOLI BITUMINOSI PREFORMATI DRAIN OUTLETS & CORNERS PRE-FORMED IN BITUMEN

METODO DI APPLICAZIONE METHOD OF APPLICATION

Trovare il punto dello scarico e facendo molta attenzione ritagliare la membrana ed aprire lo scarico.

Find the outlet hole and very carefully cut out the membrane and open the drain.

FIG. 19-20-21

Scaldare leggermente l'apertura dello scarico con la fiamma e successivamente, con cannello caldo ma spento, rifinire i bordi interni dello scarico.

Lightly torch the internal hole outlet area, then with the hot torch bell (extinguished) iron the internal edges to perform the sealing.

FIG. 22-23-24
